Education

- **Shanghai Jiao Tong University** Shanghai, China
  B.Eng. in Computer Science; Overall: 88.24/100, CS Courses: 91.07/100 *Sept. 2018 – June 2022 (Expected)*
  Relevant Coursework: Artificial Intelligence, Visualization, Computer Network, Operating System, Computer Architecture and Organization, Algorithm, Data Structure, Linear Algebra, Probability and Statistics, Calculus

Skills

- **Programming**: C/C++, Python, LaTeX
- **Packages**: Pytorch, NumPy, pandas, AllenNLP, PyQt5
- **Knowledge**: NLP, Speech, Multimodal Deep Learning, Question Answering, Knowledge Graph

Experience

- **Horizon Robotics** Beijing, China
  Audio-Video Multimodal Speech Algorithm, *Research Intern* *Apr. 2021 – Present*
  - Doing research on Audio-Video Multimodal Speech Recognition.
- **John Hopcroft Center for Computer Science at Shanghai Jiao Tong University** Shanghai, China
  Leveraging Uni-Modal Self Supervised Learning for Multimodal AVSR, *Research Intern Mar. 2021 – Present*
  - Trying to use uni-modal pre-trained models trained by contrastive learning in large-scale datasets to promote Audio-Video Speech Recognition under the guidance of Prof. Zhouhan Lin.
  - This work can reduce the size of the aligned dataset needed for training Multimodal Speech Recognition model.
  - Audio Only model outperforms current Speech Recognition model in LRS2 dataset.
- **NSF Center for Big Learning at University of Florida** Gainesville, FL
  Improving Question Answering using EncyclopediaNet, *Summer Research Intern* *July 2020 – Sept. 2020*
  - Improved question answering on CommonsenseQA using EncyclopediaNet under the guidance of Prof. Dapeng Oliver Wu. Constructed EncyclopediaNet by using facts as nodes and connecting them with each other through multi-hop if-then reasoning.
  - Extracted the 5W1H information of simple sentences to structure the nodes in EncyclopediaNet using the Bert-based Semantic Role Labeling model.
- **Data Driven Software Technology Lab at Shanghai Jiao Tong University** Shanghai, China
  An AI-based Approach to Check Coding Style, *Research Intern* *July 2019 – Dec. 2019*
  - Developed a coding style automatic generator, which can automatically generate personalized Python coding style configuration files based on existing code in the codebase, using Pylint and PyQt5.

Selected Projects

- **Curriculum Learning for Sparse Drug-Target Interaction Mining**: Introduced curriculum learning to solve the problem of sparse Drug-Target Interaction Prediction in Science and Technology Innovation course and got 96/100, the model achieved an F1 score of 0.24 on the highly unbalanced test set.
- **Drug Molecular Toxicity Prediction**: Built GCN and GAT to solve the problem of Drug Molecular Toxicity Prediction in Artificial Intelligence course and got 23/25, the model achieved an AUC score of 0.89 on the test set.
- **MIPS-like Multi-Cycle Pipeline Processor**: Built a MIPS-like Multi-Cycle Pipeline Processor using Verilog in Experiments in Computer Organization course and got 100/100. The processor can execute 31 instructions and supports stall, forwarding, interrupt and exception.
- **Xconey**: Developed an IIoT software that can deal with both data extraction and DNC communication. It can extract the main information by analyzing G-code and communicate with most CNC machine tools. At present, the software has been updated in 5 versions and put into use in the workshops of several colleges and universities.

Awards

- **Academic Excellence Scholarship (*2021*)**: out of 155 candidates in the department
- **Academic Excellence Scholarship (*2020*)**: rank 31 in 155 candidates in the department
- **Academic Excellence Scholarship (*2019*)**: rank 54 in 470 candidates in the school
